

CUSTOMER JOURNEY MAP HEART DISEASE ANALYSIS USING TABLEAU

SCENARIO

A data analyst explores the Heart_new2.csv dataset in Tableau to discover insights about heart disease risk factors and share findings through an interactive dashboard and story.

ENTICE

Identify the need for data-driven heart disease analysis.

ENTER

Import and explore the heart disease dataset in Tableau.

ENGAGE

Analyze data, create visualizations, dashboard and story.

EXIT

Analyze insights and identify key risk factors.

EXTEND

Share and use insights for better healthcare decisions.

STEPS What does the person (or group) typically experience?	ENTICE	ENTER	ENGAGE	EXIT	EXTEND
GOALS & MOTIVATIONS At each step, what is a person's primary goal or motivation?	- Recognize the importance of analyzing heart disease data. - Define objective and scope of analysis.	- Obtain Heart_new2.csv dataset. - Connect and import data into Tableau. - Review fields and data types.	- Clean and prepare data. - Create calculated fields (e.g., Age Number). - Build 10 visualizations. - Design interactive dashboard. - Create Tableau Story.	- Explore filters and interactively analyze results. - Identify key patterns and risk factors. - Draw meaningful insights.	- Publish dashboard and story on Tableau Public. - Share insights with stakeholders. - Use insights for informed healthcare decisions.
INTERACTIONS What interactions do they have at each step?	- Discuss with healthcare professionals. - Review problem statement and objectives.	- Import CSV in Tableau. - Explore data grid. - Verify field names, data types and values.	- Use Tableau features (filters, calculations, charts, dashboard). - Interact with different visualization types.	- Apply filters (Gender, Age Group, Smoking, Diabetic, etc.). - Drill down for deeper analysis.	- Publish on Tableau Public. - Share link with team and stakeholders. - Gather feedback.
POSITIVE MOMENTS What steps are enjoyable, productive, motivating, delightful or exciting?	- Clear understanding of the problem. - Excitement to start the analysis.	- Smooth data import. - Dataset looks well-structured and complete.	- Discovering interesting patterns. - Creating impactful visualizations. - Seeing the dashboard come together.	- Finding key risk factors. - Insights reveal meaningful trends. - Filters help in exploring data easily.	- Dashboard and story published successfully. - Positive feedback from stakeholders. - Insights help improve health decisions.
NEGATIVE MOMENTS What steps are frustrating, confusing, angering, costly or time-consuming?	- Unclear objective or requirements. - Difficulty in understanding the dataset initially.	- Missing values or inconsistent data. - Incorrect data types. - Duplicate records.	- Data cleaning takes time. - Creating calculated fields can be tricky. - Designing the dashboard takes multiple iterations.	- Too much data to analyze. - Hard to find correlations sometimes. - Filters not giving expected results.	- Publishing issues or permission errors. - Stakeholders may need time to understand visuals.
AREAS OF OPPORTUNITY How might we make each step better? What ideas do we have?	- Define clear objectives and KPIs. - Understand stakeholder needs better.	- Improve data quality before analysis. - Use data validation techniques.	- Standardize calculations and naming. - Use templates for faster dashboard design. - Add more interactivity.	- Use advanced analytics (trend lines, forecasting). - Add tooltips and explanatory text.	- Automate regular dashboard updates. - Provide training for stakeholders. - Collect feedback and enhance visualizations.

PERSONAS / USERS:

Data Analyst, Healthcare Professional, Doctor, Researcher, Hospital Administrator, Policy Maker
